1. Executive Summary

AIO Fusion is the first integrated PR, content marketing and AI authority platform. It enables businesses, agencies and marketing teams to systematically improve their visibility with AI search agents (LLMs) by optimising and enhancing their existing marketing communications out-put.

The platform will create significant business marketing and PR efficiencies and elevate the human aspect of marketing communications. It is designed with the user in mind with an intuitive flow and natural alignment with content development, research and planning objectives.

With more than [80% of LLM citations come from earned media](#) and more than [90% of B2B buyers using AI to support decision-making](#) — using PR and marketing content is a critical and underserved need as AI-driven research now plays a dominant role in B2B purchase decisions and consumer search.

The platform is being built in two stages. The Core Platform V1 (MVP) is ready for testing in July 2026. The Agentic Layer — enabling autonomous, agent-driven PR programme management — will be developed July–September 2026, with the full AI-PR SaaS V2 launching Q2 2027. The initial target market is B2B PR and marketing professionals, however the proposition is equally applicable to B2C brands and in-house consumer marketing teams, significantly expanding the addressable market. Any business or brand seeking AI visibility — whether selling to other businesses or directly to consumers — benefits from the same earned media and PR content approach that underpins the platform.

Business	AIO Fusion Ltd (to be incorporated June 2026)
Product	AI-PR SaaS — integrated PR management, content marketing and AI authority optimisation platform
Market	TAM ~\$15B+ (PR tools \$13.8B + GEO/AEO platforms \$0.5–1B, GEO growing at 34–45% CAGR). SAM ~\$1.5–2B (English-language markets; AI-visibility-seeking buyers). SOM £1–3M ARR (Y1–2) scaling to £20–30M ARR (Y4–5). See Section 2.2.
Revenue model	Annual SaaS subscription — In-house £5,000/yr; Agency from £5,500/yr base + £500/yr per additional client project (average agency ARR ~£6,500/yr with add-ons); V2 Agentic from £8,500/yr. US pricing in USD at ~15% value premium.
Funding sought	£550,000–£600,000 pre-seed (£250,000 SEIS + £300,000–£350,000 EIS). Target close: Sept 2026 (SEIS) + Dec 2026 (EIS). 3-person sales team operational from launch. See Section 6.
Launch	November 2026 – January 2027

2. The Problem & Opportunity

2.1 The Shift to AI-Driven Search

Over 90% of B2B buyers now use AI to support purchase decision-making. More than 80% of LLM citations come from earned media. As AI search (ChatGPT, Perplexity, Gemini, Claude) replaces traditional Google search for information and vendor discovery, businesses need to win visibility with machines as well as humans.

With its primary task being to deliver earned media, PR is a fundamental driver of authority and visibility performance.

This creates a clear gap: existing PR SaaS tools (Cision, Muck Rack, Agility, Roxhill, Onclusive) focus on human-readable media monitoring and brand signals. None address AI visibility optimisation or agentic programme management.

Meanwhile, emerging AI authority platforms such as Seachable.com, Profound, Peec AI, Scrunch AI, Otterly.AI, Semrush (AI Visibility Toolkit) are orientated to the SEO and brand marketing space.

2.2 Market Size: TAM / SAM / SOM

The addressable market for AIO Fusion spans four distinct customer segments, three of which have not been fully quantified in previous market analysis. The in-house team market — both B2B and B2C — is at least as large as the PR agency market by client volume and significantly expands the total UK SOM.

Total Addressable Market (TAM)

Market Segment	Global Size (2025/26)	Notes
Global PR tools and software	~\$13.8B (2025)	PR monitoring, distribution, analytics tools. Growing at ~7% CAGR. Source: Verified Market Research.
GEO / AEO platforms (AI visibility)	~\$520M–\$1B (2025)	Emerging category, 34–45% CAGR. Includes Profound, Scrunch AI, Peec AI, Otterly.AI. Source: industry estimates.
SEO software and tools market	~\$1.6B (2025)	Adjacent market. UK digital marketing market alone valued at ~£19B. SEO agencies = secondary buyer segment.
Combined TAM	>\$15B	AIO Fusion competes across PR tools and GEO/AEO layers.

UK Serviceable Addressable Market (SAM) — by Segment

The UK SAM is segmented across four buyer types. The in-house team segments — previously underquantified — represent the single largest opportunity by volume in the UK.

Segment	UK Pool	Addressable	Basis and Notes
---------	---------	-------------	-----------------

PR & Communications Agencies	~5,800–6,000	~520	UK PR agency market per PRCA 2025. ~90% are sub-10 staff. Addressable pool = ~520 agencies with £500k+ revenue and a technology budget. Source: PRCA.
PR Agencies — £250k–£500k turnover	~400–700 (est.)	~80–140. Approximately 400–700 UK agencies fall within the £250k–£500k revenue band. At 20% addressable, this adds 80–140 agencies with a clear ROI case: a single additional client billing line recovers the full annual subscription. AI visibility is a genuine differentiator for new business pitches at this growth stage. Source: PRCA 2025 agency size distribution.	
In-House B2B Marketing/Comms Teams	~46,700 companies (50+ employees)	~2,500–4,000	ONS 2025: 38,190 medium and 8,550 large UK companies. PRCA 2025 Census: ~34% of UK PR/comms practitioners work in-house. At 3–4 per team, ~10,000–14,000 distinct in-house teams; of these ~30% are B2B-focused and AI-ready with SaaS budget: ~2,500–4,000 teams addressable.
In-House B2C Marketing/PR Teams	~5,000–8,000	~800–1,500	Consumer brands with dedicated PR/comms budget. Addressable = digital-first brands with AI visibility interest and SaaS budget (~15–20% of total). Growing segment: PRCA 2025 confirms 26% of UK PR practitioners work in private sector in-house roles, of which a significant proportion serve consumer brands.
SEO & Digital Marketing Agencies (Secondary Market)	~7,673 total digital agencies	~600–1,000	UK digital marketing agencies. Of ~7,673 agencies (DMA 2025), approximately 10–15% actively offer or seek to offer GEO/AEO services. These are In-house plan buyers (no

			client reporting module required) seeking to add AI visibility to their service suite.
Total UK SAM (combined)		~4,500–7,160	Represents AIO Fusion's full UK buyer universe.

UK Serviceable Obtainable Market (SOM) and US Potential

Segment	Y1–Y2 UK SOM	Indicative ARR	Notes
PR Agencies (Agency Plan £6,500/yr)	80–130 clients	£520k–£845k ARR	15–25% of 680–760 addressable agencies (inc. £250k–500k segment). 3-person sales team.
In-House B2B (In-house/Agency £5k–6.5k/yr)	60–120 clients	£300k–£780k ARR	In-house sales manager focused on this segment from November 2026. No legacy contract blockers. Faster decisions.
In-House B2C (In-house £5k/yr)	20–50 clients	£100k–£250k ARR	Emerging segment. Beta programme targets 3–5 B2C brands. Growth accelerates with B2C case studies.
SEO/Digital Agencies (In-house £5k/yr)	30–60 clients	£150k–£300k ARR	Secondary market. Captured via LinkedIn targeting of SEO agency heads and events (The Drum, Performance Marketing World).
Total UK Year 1–2 SOM	190–360 clients	£1.07M–£2.18M ARR	By end of Year 2 (December 2028).
US Market (from Q3 2027)	40–80 clients (Y2–3)	£250k–£500k ARR	US addressable market: ~5–7x UK equivalent. ~17,500–28,000 B2B in-house; ~3,000+ PR agencies. Entry via targeted LinkedIn campaigns and direct US sales outreach.
Year 3–5 UK + US ARR target		£5M–£10M+	Scaling UK base, US growth, product expansion (V2 agentic), potential EU entry.

Why in-house teams matter as much as agencies: The UK alone has 2,500–4,000 addressable in-house B2B teams — nearly 5–8x the addressable agency market by volume. While the average revenue per agency client is higher (due to multi-seat and client project modules), in-house teams have shorter sales cycles, no annual contract competition from Cision or Meltwater (in-house teams typically use cheaper or simpler tools), and represent a broader geographic spread. The Beta programme is deliberately weighted toward in-house participants to build case study diversity before the agency sales push at V1 launch.

SEO and digital agencies as a secondary market: The UK's ~7,673 digital marketing agencies increasingly need to offer GEO/AEO services to retain clients as AI-driven search erodes traditional SEO deliverables. AIO Fusion's in-house plan (£5,000/yr) gives SEO agencies the measurement infrastructure to build a GEO service line. It also enables them to cross over into the digital PR field or enhance existing SEO-based digital PR services. This segment requires no

bespoke product development and can be captured through The Drum, Performance Marketing World, and LinkedIn campaigns targeting SEO/Digital Agency Heads.

2.3 Competitive Advantage

The GEO/AEO market is maturing rapidly, with well-funded competitors targeting different segments of the opportunity. The table below maps the key players; the narrative following explains where AIO Fusion sits and why no existing platform addresses the same problem in the same way.

Competitive Landscape

Note: The competitive analysis below reflects the full AIO Fusion V2 platform (including release gateway and full AI-powered media database, planned from Q2 2027). For a comparison against V1 Beta capabilities, see the V1 Beta Competitive Landscape section that follows.

Competitor	Type	Pricing	What it does	Gap vs AIO Fusion
Profound	AI visibility monitoring (enterprise)	Enterprise (custom)	Real-time AI crawler data; brand visibility across major LLMs; SOC 2 compliant. Workflows automation layer (2025). Highest AEO score in independent rankings.	Measurement only. No PR workflow, content creation or media intelligence. Enterprise pricing excludes independent agencies and mid-market in-house teams.
Scrunch AI	AI visibility monitoring + analytics	\$250/mo (Core); \$500/mo (Agency)	Tracks 7+ AI engines; persona and funnel segmentation; GA4 integration; Agent Experience Platform. Raised \$19M (Seed + Series A, 2024-25).	Monitoring-only. No PR workflow, pitch creation, or media intelligence. US-focused; no PR agency multi-client management workflow.
Muck Rack (Generative Pulse)	Established PR platform + GEO monitoring	Enterprise (custom)	PR media database + Generative Pulse GEO monitoring. Links journalist influence to AI visibility. AI Share of Voice and source transparency reporting.	Monitoring only. No content creation, GEO scoring, or comms planning. GEO is an add-on to media monitoring, not an integrated workflow. Enterprise pricing.
Semrush / Ahrefs AI Toolkits	SEO platforms adding AI visibility tracking	\$130-\$500+/mo	AI visibility scoring bolted onto keyword ranking tools. Built for SEO professionals. Ahrefs Brand Radar flagged with accuracy concerns in early 2026 testing.	Wrong buyer: SEO teams, not PR/comms professionals. Keyword analytics vs prompt-level visibility. No earned media or PR workflow.
Cision / Onclusive / Roxhill	Established PR media monitoring platforms	Enterprise (custom)	Media database, coverage monitoring, journalist outreach, reporting. Built for human-readable coverage tracking in the link-based web era.	No AI visibility measurement, GEO scoring, or LLM-optimised content workflow. Not built for the AI search era.
Peec AI	AI visibility monitoring (mid-market)	£80–450/mo (£89–505)	Prompt-level brand mention frequency and citation context across ChatGPT, Perplexity, Google AI Overviews. Hallucination detection. Described as the search console equivalent for AI. Additional LLMs (Claude, Gemini) available as paid add-ons.	Monitoring only. No PR workflow, content creation, pitch generation, or media intelligence. Euro-priced; no UK PR market focus. No multi-client agency management.

Competitor	Type	Pricing	What it does	Gap vs AIO Fusion
Otterly.AI	AI visibility monitoring (SME/budget)	\$29–489/mo (£23–390)	Accessible entry-level GEO monitoring across ChatGPT, Google AI Overviews, Perplexity, Copilot. Good for small SEO teams transitioning to GEO. Lite plan: 15 prompts/month.	Monitoring only. Built for SEO teams, not PR professionals. No content creation, media intelligence, or PR workflow. No agency multi-client management.
Yotpo Discover	AI visibility (e-commerce specific)	Custom	Built for e-commerce: SKU-level product data, shopper reviews, brand presence tracking across AI shopping infrastructure. Not a general-purpose GEO platform.	E-commerce only — not a direct competitor. Demonstrates B2C AI visibility demand but serves a fundamentally different use case with no PR, earned media, or communications workflow.
Searchable.com	AI visibility monitoring + content optimisation platform (US/UK; £40M seed, launched Nov 2025)	From \$50/month (Starter: 1 domain, 50 prompts). 14-day Pro trial.	Tracks brand share of voice and citations across 7 AI engines (ChatGPT, Claude, Perplexity, Google AI Overviews, Copilot). AI-generated content briefs, recommendations, and technical site audits. Combines monitoring with content execution guidance in one platform. High-profile founding team (Chris Donnelly, Verb Brands). Six-figure ARR within 24 hours of invite-only launch.	Monitoring and content brief tool — no PR workflow, journalist database, pitch creation, press release production, or media outreach capability. Built for marketing and brand teams, not PR professionals or agencies. No multi-client agency architecture.

Competitive Landscape: V1 Beta

The following table assesses the competitive position of AIO Fusion V1 Beta — the platform as it will be available to beta participants from July 2026. V1 Beta does not include a release gateway or a full AI-powered media database (planned for V2). Despite this, AIO Fusion V1 is uniquely positioned: no current competitor combines GEO/AEO monitoring with a PR workflow, content creation, and media intelligence layer at mid-market pricing.

Competitor	Category	What it does	Gap vs AIO Fusion V1 Beta
Profound	AI visibility monitoring	Real-time LLM crawler data; brand visibility across major AI models; SOC 2 compliant. Enterprise-focused.	Measurement only. No PR workflow, content creation, or media intelligence. Enterprise pricing (custom, est. £12k–25k/yr) excludes independent agencies and mid-market in-house teams.
Scrunch AI	GEO monitoring	AI search visibility tracking across ChatGPT, Gemini, Perplexity. Dashboard and basic reporting.	Monitoring only. No workflow, no content creation, no media intelligence. No PR context. AIO Fusion V1 provides a complete workflow layer that Scrunch does not.

Peec AI	AI citation monitoring	Tracks brand citations in AI-generated responses. Keyword and brand-level analysis.	Single-function monitoring tool. No PR workflow, no content, no media. Lower price point but narrower scope. Complementary to, not competitive with, AIO Fusion V1.
Otterly.AI	AI brand monitoring	AI sentiment and brand mention monitoring across LLMs. Freemium entry tier.	Freemium/SME positioning. No PR workflow, no media intelligence. AIO Fusion V1 is positioned distinctly above in scope and pricing.
Meltwater	Media monitoring & PR platform	Comprehensive media monitoring (traditional + social), journalist database, press release distribution. Established enterprise PR platform.	No GEO/AEO capability. Traditional media monitoring only. Pricing £12,000–20,000+/yr. AIO Fusion adds the AI visibility dimension Meltwater cannot currently provide.
Prowly	PR workflow	Press release creation, media database, coverage tracking. Mid-market PR platform.	No AI visibility or GEO/AEO monitoring. No autonomous agents. AIO Fusion V1 provides measurably broader capability at a comparable price point (£5k vs Prowly £3.2–4.5k/yr).
Roxhill	Media database	UK journalist/media title database. Contact search and distribution. No GEO.	Media database only (no AI visibility, no workflow, no content creation). AIO Fusion V1 includes media intelligence without a full database (planned V2); Roxhill is a one-dimensional tool at similar pricing (~£6–8k/yr).
Searchable.com	AI visibility monitoring + content optimisation (well-funded; launched Nov 2025)	Tracks brand citations and share of voice across 7 AI engines. AI content briefs and technical site audits. From \$50/month (Starter). £40M seed raise; high-profile team. Six-figure ARR at launch.	No PR workflow, journalist database, pitch creation, or press release tools. Marketing/brand buyer, not PR professional. No agency multi-client architecture for PR teams. Monitoring-and-brief platform vs. AIO Fusion's integrated PR programme management.

AIO Fusion's Differentiated Position

The defining gap in the current market: every existing tool either measures AI visibility, or helps with PR and content — none does both in one integrated workflow. AIO Fusion closes that loop. Core competitive moats:

- **The only integrated platform.** Measurement, PR and content workflow, and (Phase 2) autonomous agentic execution in a single platform. Competitors offer point tools; AIO Fusion closes the entire diagnose-plan-create-publish-measure loop.
- **Built for the right buyer.** Designed for PR and marketing professionals, not SEO analysts or enterprise data teams. The workflow, language and outputs (pitches, releases, comms plans) are native to how PR and marketing teams actually work.
- **Mid-market pricing.** Profound and enterprise PR platforms price out independent agencies and mid and lower-market in-house teams. At £5-6.5k/yr and with a comprehensive service suit, AIO Fusion serves segments heritage platforms cannot reach economically.

- **Proprietary scoring methodology.** Consistency is key to authority. The six-category GEO framework and dual-LLM AI Visibility Score are comparable across time, competitors and an agency portfolio, creating a data asset that compounds in value as the platform scales.
- **Agentic Phase 2.** No competitor offers an autonomous, human-in-the-loop PR programme management layer. The Phase 2 architecture with human approval gates, per-account isolation, and confidence-threshold guardrails is a structural lead that point-tool competitors cannot easily replicate.

The PR and Earned Media Advantage

Every competitor in the AI visibility space approaches the problem from an SEO or brand marketing perspective — optimising websites, keywords, and on-page signals for AI discovery. AIO Fusion is built on a fundamentally different premise: the evidence shows that more than 80% of LLM citations originate from earned media — independent journalistic coverage, expert commentary, industry publications, and third-party editorial sources. AI models rank these sources as authoritative precisely because they are not created or paid for by the brand being referenced.

This means PR and content marketing — securing editorial coverage, expert citations, and third-party validation — is the highest-leverage activity for building AI visibility. An SEO team can optimise a brand's website comprehensively; it will have minimal impact on what ChatGPT or Perplexity says about that business in response to a natural language query. A PR team that secures a trade publication feature, places the CEO as an expert source, or generates genuine third-party coverage, creates the content that AI models actively prefer and cite.

This dynamic holds equally for B2C. When a consumer asks an AI agent for a hotel recommendation, a product comparison, or a trusted service provider, editorial reviews, press coverage, and award recognitions — not paid advertising or keyword-optimised web pages — drive the AI response. AIO Fusion measures, plans, and builds the earned media that wins AI visibility for both B2B and B2C clients.

AIO Fusion is the only platform integrating this PR-led strategy end-to-end: auditing where earned media is generating AI citations, building the communications plan to close the gaps, creating the content and media pitches, and measuring impact over time. Competitors offer a monitoring dashboard; AIO Fusion offers the complete system.

3. Product

3.1 Core Platform V1 (MVP)

The MVP delivers an integrated suite of PR and content marketing management tools, each AI-optimised for LLM authority building. Its design is based on decades of experience in managing PR and marketing programmes and the daily challenges communications practitioners face. It streamlines operations, optimises output consistently based on detailed Project Data covering aspects of marketing, sales and business operations. Key modules:

- Strategy & Audit — AI authority audit across earned/owned media; GEO strategy builder
- Comms Planner — plan, score and manage PR and content schedules for AI authority impact
- Content Optimiser & Editor — multi-LLM content creation keyed to brand messaging
- Content Creator — rapid ideation, article development and media pitch generation
- Media Research — AI-recommended journalist contacts and media insights
- Marketing Intelligence — conference and awards scoring
- Measure & Report — PR impact and AI authority growth measurement
- Archive — long-term content curation and enhancement
- Website Content GEO — on-page content optimisation for AI visibility
- Website Technical GEO — back-end technical AI authority instructions

3.2 Agentic Layer (V1 → V2)

Phase 2 transforms the platform from an assisted workflow tool into a semi-autonomous system that manages a brand's AI authority continuously. Agents will in effect operate the platform semi-autonomously with direct human control as needed dependent on the sensitivity of activity and the requirement to edit and enhance outputs. The live measurement engines already built (Phase 1) are the feedback signal the agents will optimise against — which is why they were built first. Agent training and test phase: July–November 2026. Full agentic V2 launch: Q1 2027.

Agent Architecture

Each user account runs its own isolated pod of agents: a single coordinating agent at the top and specialist workers beneath, so no client's data or agents ever touch another's. The co-ordinating agent reports directly to human managers through platform and other optional channels. The platform will enable human communications managers to view and control every aspect of agent activity and intervene, edit, enhance and instruct at every stage. Human operators will have ultimate control.

Account Strategist (Orchestrator). Working within clearly defined ethical, operational and client/project briefing parameters - reads the latest scores, decides what matters most, assigns work to specialist leads, resolves conflicts (e.g. when SEO and PR both want to change the same page), and reports back to the user in plain language. Knows when to stop and request human sign-off.

Beneath the orchestrator sit four specialist leads, each managing narrow worker agents:

- **Earned Media Lead.** Workers: Visibility Monitor (re-runs the AI Visibility Audit on a schedule; flags drops or competitor gains); Opportunity Scout (watches for relevant journalist requests and trending stories); Pitch Drafter (writes tailored pitch ideas for named contacts, ready for human approval before anything is sent); Placement Agent (posts approved pieces to owned channels and media platforms, always behind human sign-off); Coverage Tracker (detects new mentions and notes which ones AI engines are picking up).
- **GEO / SEO Lead.** Workers: Technical GEO Agent (runs the Website Visibility Audit, identifies missing schema, prepares fixes); Content GEO Agent (checks whether pages answer questions people ask AI tools); Reference Builder (works to get the brand and named experts quoted so AI answers name them); Question Watcher (tracks what audiences are asking AI and search tools).
- **Content Lead.** Workers: Drafting Agent (turns approved pitch ideas and content gaps into headlines, articles and transcripts from the brand's gold messaging, produced as drafts for human editing and approval); Optimisation Agent (applies per-field optimisation against the semantic phrase

guide); Repurposing Agent (spins one strong asset into social posts, Q&A snippets and FAQ entries built for AI extraction).

- **Measure & Report Lead.** Workers: Scorekeeper (tracks every score across all audits over time); Impact Analyst (links activity to results, e.g. “adding Person schema lifted the AI Visibility Score by X points”); Reporter (writes the client-ready summary in plain language).

Guardrails (Built in from Day One)

- Humans are in the loop across every activity and determine Project Data input which guides automated actions along with specific task briefing. Agents draft; people approve and tailor content and sign-off external out-put via the Release Gateway. Nothing goes live without sign-off.
- Per-account data and agent isolation. One client’s data and agents never touch another’s.
- Full activity log. Every agent action is recorded with a reason, providing a complete audit trail.
- Spend and rate limits. No agent can run away with API costs or outreach volumes.
- Confidence threshold. Low-confidence actions queue for human review; routine high-confidence actions (such as re-running an audit) run autonomously.

Phased Rollout

- a. **Monitors and Scorekeeper only.** Watch and alert, no actions taken. Low risk, immediate value to users.
- b. **Draft-only agents.** Pitches, content and prepared GEO fixes generated but none applied automatically.
- c. **Add the orchestrator.** Prioritise and bundle work into a weekly plan presented to the user for approval.
- d. **Autonomous low-risk actions.** Approved, routine actions run automatically with everything logged; higher-risk actions continue to require human approval.

3.3 Development Roadmap

The roadmap below covers V1 core platform delivery, agentic layer development, and the planned V2 feature set. V2 functionality — including the Journalist and Media AI Authority Score, full media database, release gateway, and tactical media relations module — are in design and will be built following V1 commercial validation.

Phase	Timeline	Deliverable
Core Platform V1 — MVP	June 2026	MVP complete; internal testing and pilot partners. All V1 modules functional: AI visibility diagnostics, content planning, content creation, media intelligence (basic), measurement dashboard.
Agentic Layer — Agent 1	July–Sept 2026	Agent training, testing and initial deployment. Visibility Monitor Agent and Content Creation Agent operational for beta programme.
Beta Programme	July–Oct 2026	15+ beta participants. Case study capture. Product feedback loop feeding V1 refinements and V2 prioritisation.
Full V1 SaaS Launch	Oct 2026	Public launch. Full commercial team operational. UK marketing programme begins. PRCA Technology Partner accreditation application submitted.
V2 Feature Set — Design Sprint	Q3 2026–Q2 2027	Agentic Layer developed and tested. Enhanced platform design and architecture for four V2 feature modules (see below). In-house developer hired October 2026; Spencer/Bluhalo advisory continues.
V2 Module 1: Journalist &	Q1–Q2 2027	AI-generated authority score for individual journalists and media titles based on AI-published content

Media Title AI Authority Score		analysis: citation rate, AI platform presence, content authority signals. Enables PR teams to prioritise outreach based on AI reach, not just traditional readership. Integrated into the media intelligence module.
V2 Module 2: Full AI-Powered Media Database	Q2 2027	Comprehensive UK (and US) journalist and media title database with real-time updates. AI-enriched profiles including beat analysis, AI authority score, recent coverage, and contact data. Replaces the need for Vuelio, Roxhill, or Cision as a standalone media database tool.
V2 Module 3: Release Gateway	Q2–Q3 2027	Direct press release publishing and wire service distribution. Integrations with PR Newswire, Business Wire, or equivalent UK wire services via API. One-click distribution from within the AIO Fusion platform. Eliminates the need for a separate distribution tool. Agentic Layer will enable agent management of this process if desired.
V2 Module 4: Tactical Media Relations	Q3 2027	Live journalist opportunity monitoring via ResponseSource API integration. Real-time alerts for journalist enquiries matching client topics or brand areas. In-platform response drafting with AI assistance. Closes the gap between monitoring and active media relations management.
Full V2 Agentic Launch	Q2 2027	Full Agentic Layer sitting across the platform, plus all V2 modules live. Existing V1 subscribers offered preferential upgrade pricing. US market soft launch Q3 2027.
US Structured Launch	Q4 2027	US sales team operational. USD pricing. Delaware entity consideration. Seed round funded US expansion.

The V2 platform extends significantly beyond V1 and will also integrate with the Agentic Layer. Four additional modules are in design and will be built following V1 commercial validation, each addressing a specific gap in the current market:

1. Journalist and Media Title AI Authority Score. An AI-generated authority score for individual journalists and media titles, based on AI-published content analysis: citation rate, AI platform presence, content authority signals, and LLM frequency of reference. This enables PR teams to prioritise media outreach based on a journalist's AI reach — not just traditional readership or Domain Authority. No current PR platform offers this measurement layer.

2. Full AI-Powered Media Database. A comprehensive UK and US journalist and media title database, enhanced and updated in real time by AI. Profiles include beat analysis, AI authority score, recent coverage, and contact data. Designed to replace the need for Vuelio, Roxhill, Agility or Cision as a standalone media database — integrated directly into the AIO Fusion workflow.

3. Release Gateway. Direct press release and article publishing within the platform, with wire service API integrations (PR Newswire, Business Wire, and UK-equivalent wire services). One-click distribution from within AIO Fusion eliminates the need for a separate distribution tool and closes the diagnose-plan-create-publish-measure loop end-to-end.

4. Tactical Media Relations. Live journalist opportunity monitoring via ResponseSource API integration. Real-time alerts surface journalist enquiries matching client topics or brand areas. In-platform AI-assisted response drafting enables PR teams to act on live media opportunities faster than any current workflow allows. This module transforms AIO Fusion from a planning and measurement tool into an active media relations engine.

Accelerated timeline note: V1 soft launch to Beta converts October 2026; V1 public launch November 2026 with full commercial team operational. V2 agentic + full module launch Q2 2027. US soft launch Q3 2027. Structured US launch Q4 2027. Seed round trigger Q3 2027 at £200,000+ ARR. See Section 4.3 for full commercial timeline.

3.4 Technology Architecture

This section summarises the technology stack for diligence purposes. The platform is built on modern, production-grade open-source foundations with no single-vendor lock-in at any layer.

Layer	Stack / Detail
Frontend	React with Vite, Tailwind CSS, Radix UI / shadcn component primitives, Framer Motion for interaction, Lucide icon set. Single responsive application serving both the public marketing site and the authenticated platform.
Backend	Node.js / Express API server written in TypeScript. Hardened production patterns: authentication middleware, per-endpoint rate limiting, and concurrency guards to protect the AI and crawl operations against cost overrun and abuse.
AI Integration	Direct integration with both OpenAI and Anthropic SDKs. Dual-engine architecture: the platform probes more than one model family rather than relying on a single provider, improving robustness and reducing vendor dependency risk. Both live analysis engines (Earned Media Visibility Audit and Website Technical GEO) make real external API calls in production today.
Database	PostgreSQL with Drizzle ORM for server-side persistence (user accounts, authentication, multi-tenant project data). Current build holds project working data client-side for fast, self-contained demonstration; Phase 2 connects all modules to persistent server-side data.
Authentication	Secure login with user roles (including administrator role and user management). Mobile authentication path in place. Role-based access control supports multi-tenant agency use from day one.
AI Discoverability (own site)	The platform’s own marketing site ships with robots.txt tuned to welcome AI crawlers (GPTBot, ClaudeBot, PerplexityBot), an llms.txt structured summary for AI agents, and a full sitemap. The product practises what it sells — a deliberate and demonstrable proof of concept.

4. Target Customers & Go-to-Market

4.1 Target Customer Segments

AIO Fusion serves five distinct customer segments with differentiated sales approaches. The Beta programme (July–October 2026) is weighted toward in-house teams. The Phase 2 commercial launch (from November 2026) activates all four in parallel with a three-person sales team.

Priority	Segment	UK Addressable	Plan / Price	ICP Profile
Primary A	UK PR Agencies	~520	Agency Plan: from £5,500/yr + £500/yr per client (avg. ~£6,500/yr)	Revenue £500k–£5M. 5–50 staff. Manages AI-relevant clients. Recognised the shift away from traditional media to AI-driven search. Ready to differentiate on AI visibility.
Primary B	In-House B2B Marketing/Comms Teams	2,500–4,000	In-house £5,000/yr	Tech, professional services, SaaS, B2B brand marketing. Budget for SaaS tools. Head of Marketing or Comms Director as buyer. No legacy PR platform contract in most cases.
Secondary A	In-House B2C Marketing/PR Teams	800–1,500	In-house £5k/yr	Consumer brands, retail, FMCG, financial services. Digital-first, AI-curious. GEO measurement applies equally to B2C buyer journeys — 80%+ of consumer AI queries draw on earned media.
Secondary B	SEO & Digital Marketing Agencies	600–1,000	In-house £5k/yr	SEO agencies seeking to add GEO/AEO to their service lines. AIO Fusion provides the measurement layer. Captured via The Drum, Performance Marketing World, LinkedIn targeting. No bespoke product work required.
Secondary C	PR Agencies — £250k–£500k Revenue	~80–140	Agency Plan: from £5,500/yr + £500/yr per client	Growth-stage UK PR agencies at the £250k–£500k revenue threshold. Sufficient technology budget and a compelling ROI case: one additional retained client billing at £500/month recovers the full annual subscription cost. AI visibility differentiates their new business pitches. Require straightforward onboarding;

				not yet resourced for multi-client enterprise tools. Sales approach: LinkedIn outreach and events (PRCA, CIPR).
--	--	--	--	---

4.2 Beta Go-to-Market Plan (July–October 2026)

The Beta programme runs July–October 2026 with a target of 15+ participants. It is deliberately weighted toward in-house teams (B2B and B2C) for three reasons: (1) No annual contract blockers — in-house teams rarely hold Cision or Meltwater subscriptions, enabling faster onboarding; (2) Broader case study diversity — agency and in-house results create a stronger proof library for the Phase 2 commercial launch; (3) Faster decision-making — in-house Heads of Marketing can typically approve a free beta programme within a week.

Beta Target Mix

Participant Type	Target Count	Rationale
In-House B2B Marketing/Comms Teams	5–7	No contract blockers. Fastest onboarding. Broad ICP representation (tech, professional services, SaaS).
In-House B2C Marketing/PR Teams	3–5	Demonstrates platform applicability beyond B2B. Consumer brand case studies open a separate buyer audience.
PR Agencies	3–5	Provides agency use-case evidence for Phase 2 agency sales. Spencer Gallagher introductions prioritised.
TOTAL	15+ target	Conversion target: 70%+ to paid V1 subscriptions (minimum 10 paying clients at V1 launch in October 2026).

Beta Channels

Channel	Lead (Primary)	Activity
1. Founder personal network	Patrick Barrett	Direct outreach to Simpatico PR contacts, former clients, PRCA/CIPR connections, and PR Week/PR Moment editorial relationships. Target: 20 warm conversations → 5–7 beta participants.
2. Bluhalo introductions	Spencer Gallagher	Spencer personally introduces AIO Fusion to 30–50 Bluhalo network members (agency). Target: 15–20 warm introductions → 5–8 beta participants. NB: Spencer's endorsement is a critical credibility signal.
3. LinkedIn direct outreach (unpaid)	Patrick + Natalie	Targeted connection requests + InMail to Heads of PR, Communications Directors, and Agency MDs. 200–300 outreach messages → 20–30 responses → 5–7 participants. No paid budget in beta phase.

Beta Offer and Conversion

Beta Offer	Terms
Access to AIO Fusion MVP platform	Free access July–October 2026 (4 months)
Dedicated onboarding and support	Patrick and Natalie personally onboard each beta participant
Case study agreement	Beta participants consent to named case study use in sales and marketing materials
Beta pricing discount	50% off first year subscription on conversion to paid V1 (October 2026)
Product input	Beta participants contribute to product roadmap via monthly feedback calls

Beta Timeline

Activity	Date
Beta outreach begins	July 2026
Beta participants confirmed (15+)	August 2026
Active beta testing period	July–October 2026
Case study compilation	October 2026
Pre-seed funding first close (SEIS tranche)	September 2026 (Advance Assurance target: August 2026)
Sales team hires start	September–October 2026 (funded from first close)
Beta to paid conversion / V1 soft launch	October 2026

4.3 Phase 2 Go-to-Market Strategy (from V1 Launch, November 2026)

The competitive window for establishing category leadership in the PR/AI visibility space is estimated at 12–18 months. Existing players (Semrush, Ahrefs, Meltwater) have not yet built PR workflow integration; AI-native monitoring tools (Profound, Scrunch AI, Peec AI) lack the earned media positioning that makes AIO Fusion differentiated. The Phase 2 strategy is designed to capture the UK market aggressively in Q4 2026–Q4 2027, then extend to the US from Q3 2027, before a well-resourced competitor can replicate the PR workflow approach and the Agentic Layer.

Sales Team Structure

Role	Start Date	Base / OTE	Remit
Commercial Director / Head of Sales	September 2026	£75–90k / OTE £150–180k	Leads commercial function. Builds sales playbook. Manages Agency SM and In-House SM. Prior B2B SaaS sales leadership essential; MarTech/PR background preferred. Hired before V1 launch to be operational on day one.

Agency Sales Manager	November 2026	£40–50k / OTE £80–90k	Focused exclusively on PR agency acquisition. Works Agencynomics pipeline, attends PRCA/CIPR events, manages agency-specific case studies. Former agency background preferred.
In-House Sales Manager	November 2026	£38–48k / OTE £75–85k	Focused on in-house B2B and B2C teams and SEO agency market. Consultative selling approach; comfortable with marketing director-level conversations. LinkedIn-led pipeline.

Sales Barriers and Response Strategy

Barrier	Response
Annual contracts with Cision / Meltwater / Prowly / Vuelio	Complementary positioning: AIO Fusion tracks AI visibility — the dimension monitoring tools do not cover. Agencies can add a billable AI visibility service to client programmes, recovering the AIO Fusion subscription cost immediately. Sell alongside, not instead of, existing tools.
Need for proof of delivery / untested vendor	15+ named beta case studies available at V1 launch. Spencer Gallagher endorsement (1,000+ agency contacts). PRCA Technology Partner accreditation - planned application. Target: first PRCA-endorsed GEO/AEO platform in market.
In-house annual budget cycles	Target Q1 (January) and Q4 (October–November) budget approval windows. Offer quarterly billing in Year 1 to reduce commitment barrier for first-time subscribers.
New entrant / company risk (will it still exist in 12 months?)	SEIS institutional backing signals regulatory credibility. Pre-seed raise from named angel investors (to be named post-close). Board or advisor credibility (Carpenter Box, Spencer Gallagher – others tbc). Transparent roadmap published at launch.
Price sensitivity in smaller agencies / in-house teams	ROI framing: an agency charging one client £500/month for AI visibility reporting covers the annual subscription from a single client. In-house plan at £5,000/year is sub-£420/month — one additional client billing line.

Channel 1: LinkedIn Advertising + Dripify Outreach

LinkedIn is the primary paid acquisition channel. It provides precision targeting of PR Directors, Heads of Communications, Agency MDs, Marketing Directors, and Heads of Content — the exact buyer personas for both agency and in-house segments. LinkedIn captures approximately 41% of total B2B ad budgets globally and delivers the lowest cost-per-qualified-lead for B2B SaaS.

Activity	Specification	Budget / Notes
LinkedIn Sponsored Content	Promoted posts and carousel ads	£1,000/month. Target: PR/Comms Directors, Agency MDs, Marketing Directors. CPM ~£25–35 for this audience. Budget focused on highest-

		converting audience segments. Expected 100–200 clicks/month.
LinkedIn InMail campaigns	500–1,000 targeted InMails/month	Sent from sales team profiles. Open rate ~50% for InMail. Targeting: agencies £500k+ revenue, in-house comms teams at B2B tech companies.
Dripify automated outreach	3 licences (~£100/month each)	£3,600/year. Systematic connection + message sequences for warm prospect pipeline. Commercial Director plus 2 Sales Managers.
Retargeting	Website visitors, whitepaper downloaders	Included in monthly spend. Captures warm prospects who engaged with content.
TOTAL LinkedIn budget		~£15,600/year (£12k sponsored content + £3,600 Dripify licences). Expected: 15–30 qualified leads/month at scale. CPL benchmark: £200–350/lead.

Channel 2: UK Event Sponsorships and Speaker Platform

Physical presence at the UK PR and marketing industry's key events combines brand visibility with direct access to decision-makers. AIO Fusion's launch in November 2026 is timed to coincide with the UK PR award season, providing an organic launch announcement platform.

Note: Event costs quoted are indicative rate card prices. A reduction of approximately 30% from rate card is typically negotiable, particularly for multi-event packages and early commitment. Actual costs should be confirmed directly with event organisers.

Priority	Event	Timing	Format	Est. Cost	Rationale
★★★★★	PR Week Awards	November 2026	Category sponsor + table	£8,000–12,000	Largest UK PR audience (~1,000+). Ideal V1 launch announcement platform. Positions AIO Fusion in front of every major agency MD and in-house PR Director in one night.
★★★★★	PRCA National Conference	Spring 2027	Exhibition + sponsorship	£5,000–8,000	Senior agency and in-house audience. PRCA Technology Partner application adds credibility. Direct pipeline from delegates.

★★★★	The Drum Awards / Experience	Various 2027	Sponsorship + speaker	£4,000–7,000	Broader digital/marketing audience including SEO agencies and B2C brands. Reaches secondary buyer segments.
★★★	PR Moment Awards	Spring 2027	Sponsorship	£2,000–4,000	Cost-effective. Digital-forward PR audience, growing AI focus. Good for early-adopter agency pipeline.
★★★	Performance Marketing World	Various 2027	Speaker slot	£1,000–2,000	Cross-discipline digital marketing audience. Captures SEO agency and performance marketing in-house team segment.
	TOTAL (4–5 events + collateral)			£28,000–42,000	Includes stand, collateral, travel. Speaker slots (3–5) at PRCA/CIPR/The Drum largely free with exhibitor status.

Channel 3: PR & Content Marketing

AIO Fusion's own PR programme is its most powerful proof of concept: a PR platform that earns media coverage in the publications read by its target buyers. Patrick Barrett's background as a PR professional means the company can run a credible earned media programme without outsourcing to an agency.

Activity	Target Outlets	Detail
CEO thought leadership (monthly bylines)	PR Week, PR Moment, The Drum, Campaign, Marketing Week	Patrick Barrett as the GEO/AEO authority in the PR industry. Target: 1 published byline/month from V1 launch.
Case study series	Own website, PR Week, PR Moment, LinkedIn	"How [Agency Name] increased AI citation rate by X% in 90 days." 1 published case study/month from Q1 2027.
"State of AI Search" quarterly report	Press release, industry media, PRCA/CIPR distribution	Quarterly benchmarking report on AI visibility trends across industries. Free

		download. Lead generation and earned media anchor.
Blog / SEO content programme	Own website	4 posts/month targeting GEO/AEO search terms: "AI citation tracking," "Generative Engine Optimisation," "AI visibility platform." Supported by SEO supplier.
B2B research project	PR Week, PR Moment, The Drum, PRCA/CIPR distribution. Own website.	Annual benchmarking research amongst PR and marketing target audience. Publishable research builds authority, generates earned media, and creates a PR-owned lead generation asset. Budget: £5,000–£10,000 for research fieldwork and report production.
TOTAL PR & Content budget		~£18,000–24,000/year.

Channel 4: SEO / AEO

AIO Fusion practises what it measures. The platform's own AI citation rate and organic search visibility serve as a live proof-of-product. An identified SEO supplier will manage keyword optimisation at £200–300/month with a focus on GEO/AEO-adjacent search terms.

Activity	Notes
SEO supplier retainer	£200–300/month (supplier identified). Focus: "GEO platform," "AI citation tracking," "AI visibility measurement," "Generative Engine Optimisation tool," "AI search PR," "AI PR measurement."
AIO Fusion own GEO programme	Use AIO Fusion platform to monitor and improve own AI citations across ChatGPT, Gemini, Claude, Perplexity. Publish results as content and case study. Turns self-promotion into product proof.
TOTAL SEO budget	~£3,600/year.

Channel 5: Strategic Partnerships

NB: Roxhill, Cision, Meltwater, Prowly, Vuelio, and other PR monitoring platforms are direct competitors and are not appropriate for strategic partnership. The following partnerships are complementary, credibility-building, or distribution-enhancing.

Partner	Status	Value and Activation
PRCA Technology Partner Programme	Application to lodge	"PRCA Recommended Technology Partner" accreditation. Most powerful credibility signal for agency procurement. Eliminates new-vendor risk objection for PRCA member agencies (estimated 3,000+ agencies in membership).
AMEC (Assoc. for Measurement & Evaluation of Communication)	Approach Q3 2026	International measurement standards body. Position AIO Fusion as the AI visibility measurement standard. CEO joins AMEC AI working group. Adds academic and institutional credibility particularly for in-house and corporate comms buyers.

CIPR AI in PR Task Force	Approach Q3 2026	Position Patrick Barrett as contributing expert on AI and communications measurement. Policy and standards influence with in-house CIPR member teams. Media visibility through CIPR publications.
HubSpot App Marketplace	Y1 2027	PR agencies and in-house teams increasingly use HubSpot for CRM and marketing automation. App marketplace listing = inbound discovery at zero acquisition cost. Integration would allow AIO Fusion AI visibility data to appear within HubSpot dashboards.
Digital PR / SEO agencies (referral programme)	Y1 2027	Agencies offering digital PR and SEO services (e.g. Impression Digital, Re:signal, Rise at Seven) can refer in-house clients to AIO Fusion. Referral commission: 10–15% of first-year subscription. Non-competitive (they do not build AI visibility platforms).
AI writing / content tools (Jasper, Copy.ai, ContentStudio)	Y2 2027	Complementary tools used by the same marketing and PR buyer audience. Joint webinars, email co-marketing, potential integration (AIO Fusion measurement data used to optimise AI-generated content for citation rate).

Channel 6: PRCA & CIPR Member Communications

AIO Fusion's position within the PRCA and CIPR ecosystem is a low-cost, high-credibility distribution channel. Both bodies have a combined UK membership of 30,000+ PR and communications professionals — exactly the audience AIO Fusion is targeting. Entry to this channel is through accreditation and active participation, not paid advertising.

Activity	Format	Detail & Budget
PRCA Technology Partner accreditation	Application + annual fee	Application to lodge Q3 2026. "PRCA Recommended Technology Partner" status is the most powerful credibility signal for agency procurement decisions. Accreditation covers distribution rights to PRCA member newsletters and event speaking access. No cost beyond application time; annual fee TBC on application.
PRCA member newsletter + bulletin placement	Editorial / accreditation perk	Case study and new feature announcements distributed to PRCA member base via official newsletters and bulletins. No paid placement — editorial access contingent on Technology Partner status and AI Working Group participation. Zero incremental cost.
CIPR AI in PR Task Force participation	Contributed expert / working group	Patrick Barrett contributing to CIPR AI in PR Task Force. Position as expert contributes to thought leadership visibility across CIPR membership. Access to CIPR publication editorial. Zero direct cost.
PRCA/CIPR member webinars	Hosted webinar / sponsored session	Joint webinar with PRCA or CIPR on "AI visibility for PR professionals." Target: Q1 2027. Combined membership audience reach 30,000+. No paid media cost; modest event production budget if required (~£500–1,000).

Channel 6 Budget: £0–£1,000/year. This channel is strategically important as a credibility and distribution multiplier, not a paid acquisition channel.

Phase 2 Marketing Budget Summary

The revised Phase 2 marketing budget reflects a focused, performance-led approach. LinkedIn sponsored content has been rightsized for Year 1 market building; the events programme prioritises the three highest-ROI PR industry events; PR and content is delivered primarily in-house, supplemented by an annual B2B research project. Total programme costs are substantially below the original model, improving runway and reducing pre-seed funding requirement pressure.

Channel	Annual Budget	Expected Outcome
Channel 1: LinkedIn Ads + Dripify	~£15,600	15–30 qualified leads/month at scale; 200–400 pipeline contacts/year. Rightsized for Year 1 conversion focus.
Channel 2: Events & Sponsorships (3–4 events)	~£24,000–£31,000	Direct face-to-face pipeline with 1,000+ agency and in-house professionals. Note: costs are rate card; ~30% reduction typically negotiable. PR Week Awards is the primary V1 launch platform.
Channel 3: PR & Content / B2B Research	~£5,000–£10,000	Annual B2B research report generating earned media and inbound. Bylines, case studies, and blog content produced in-house by Patrick Barrett at no incremental cost.
Channel 4: SEO / AEO	~£3,600	Organic search visibility for GEO/AEO category terms. AIO Fusion own AI citation rate as product proof.
Channel 5: Strategic Partnerships	£0	PRCA Technology Partner accreditation; AMEC; digital agency referral programme. No paid cost; high credibility and distribution value.
Channel 6: PRCA/CIPR Member Comms	£0–£1,000	Editorial distribution via PRCA/CIPR member bulletins and webinars. Contingent on Technology Partner accreditation. Near-zero cost, 30,000+ professional audience reach.
TOTAL	~£48,000–£61,000/yr	Fully costed Phase 2 marketing programme. Reviewed and reallocated quarterly based on channel performance. Represents a materially more cost-efficient programme than the original £111,600 model, with higher in-house delivery and editorial credibility.

Phase 2 Success Metrics

KPI	Q4 2026 Target	Q2 2027 Target	Year 1 (Dec 2027) Target
Total paying clients	10–15	50–70	100–150
MRR	£5k–£8k	£25k–£35k	£50k–£75k
ARR (annualised)	£60k–£96k	£300k–£420k	£600k–£900k
LinkedIn qualified leads/month	15–25	35–50	50–70
Case studies published	10–15 (beta)	20+	30+

Seed round trigger (£200k+ ARR)	—	Q2 2027 if above track	Target: Q3 2027
---------------------------------	---	------------------------	-----------------

4.4 Phase 3: US Market Entry (from Q3 2027)

The US market represents approximately 5–7x the UK opportunity by volume. The US PR agency market numbers 14,000+ agencies; B2B and B2C in-house comms teams are estimated at 17,500–35,000 addressable. Entry is planned for Q3 2027 via targeted LinkedIn campaigns and direct outreach, with a dedicated US Sales Lead recruited from Q2 2027 to lead the soft launch. A structured US market launch follows in Q4 2027, fully operational ahead of Seed round.

Milestone	Plan
US Sales Lead hire	Target hire Q2 2027. Remote US-based. Manages US pipeline ahead of soft launch. Estimated base salary £70,000–£85,000 (~\$85,000–\$105,000). OTE £130,000–£160,000. Hired 1 quarter ahead of soft launch to build initial pipeline. Funded from Seed round proceeds; timing contingent on ARR trajectory and Seed close.
US soft launch	USD-denominated pricing at a 15% value premium to equivalent UK rates. V1: In-house \$7,000/yr; Agency \$8,000/yr base + \$575/yr per additional client. V2 Agentic: In-house \$12,000/yr; Agency \$14,000/yr base + \$865/yr per client. Full US pricing table: see §5.1.3. Benchmark: Muck Rack ~\$15,000/yr; Cision from ~\$10,000/yr; Meltwater \$15–20k/yr.
US pricing	USD-denominated pricing at a ~30% premium to UK rates. In-house \$6,500/yr; Agency \$8,500/yr base. Reflects US market rate premium and purchasing power. USD billing from launch.
First 20–40 US clients	Target by Q4 2027 structured launch. Converts to £180,000–£350,000 additional ARR (at USD pricing premium).
Structured US market launch	Q4 2027. Full US commercial presence. USD billing active. US entity consideration (Delaware C-Corp or branch). PR and GEO/AEO industry associations (PRSA, AMEC US chapter) engaged. Seed round capital funds full US build-out.
US sales team expansion	Q1 2028. Two additional US Sales Managers: Agency SM (US) + In-House SM (US). Mirrors UK team structure. Base £45,000–£55,000 each (~\$55,000–\$70,000). Focused on agency and in-house segments respectively. Subject to Seed round close and US pipeline performance.
US operating model	Remote-first in Y1. No US office required until post-Seed. US Sales Lead reports to Commercial Director (UK). US pricing, T&Cs, and data processing agreements reviewed by US counsel pre-launch.

US market financial impact: first year US revenue (Q3–Q4 2027) estimated at £180,000–£350,000 ARR, contributing materially to the Seed round trigger at £200,000+ total ARR. US expansion is funded from Seed round proceeds; pre-seed funding covers UK build-out only.

5. Revenue Model & Financial Projections

5.1 Pricing Structure

AIO Fusion is priced as a mid-market annual SaaS subscription, positioned below enterprise PR platforms (Muck Rack, Cision, Roxhill) and significantly above basic monitoring-only tools. The pricing below is a

working structure for discussion, to be confirmed after beta validation. Two product versions are planned: V1 (Core Platform) launching November 2026, and V2 (Core + Agentic Layer) launching from mid-2027.

Note: All prices are indicative pre-beta. Final pricing will be set following beta feedback, conversion data, and market research. Prices shown are per annum on annual contract.

V1: Core Platform (Launch Nov 2026)

Available from public launch. Includes all diagnostic, planning, content creation, media intelligence and measurement modules (see Section 3.1). Does not include autonomous agentic agents (Phase 2).

Tier	Annual Price	Monthly Equiv.	Target Customer & Scope
In-house	£5,000/yr	£417	In-house PR and marketing teams. Full V1 platform access for one brand/project. Single user team or small in-house function. All modules included.
Agency	£5,500/yr base	£458	PR and marketing agencies. Full V1 platform; multi-client architecture; agency dashboard and reporting. Includes one client project in the base subscription.
+Per additional project	+£500/yr each	£42	Each additional client brand or project added to an Agency account. An agency managing 5 clients pays £5,500 + (4 × £500) = £7,500/yr total (£1,500 per client).

Competitive context: Roxhill (UK media database only, no GEO) starts at £4,000/yr for single-user access (media data and press release service), plus £500 per additional login. Prowly (PR workflow, no GEO) was £3,200/yr. Profound GEO Growth (monitoring only, no PR workflow) is ~£4,800/yr. AIO Fusion V1 at £5,000–5,500 provides more functionality than any single comparable tool at a competitive UK mid-market price point.

V2: Core Platform + Agentic Layer (from Q2 2027)

Includes all V1 modules plus the full autonomous agentic layer (Section 3.2): always-on visibility monitoring, autonomous content drafting, GEO remediation, and the Account Strategist orchestrator, all with human approval gates. Existing V1 subscribers upgrade to V2; new subscribers can join directly at V2 pricing.

Tier	Annual Price	Monthly Equiv.	Notes
In-house Agentic	£8,500/yr	£708	Full V1 platform + complete agentic suite. One brand/project. Always-on AI authority management with human approval gates throughout.
Agency Agentic	£9,500/yr base	£792	Full V1 + agentic layer across all client accounts. Multi-client orchestration. Per-account agent isolation included as standard.
+Per additional project	+£750/yr each	£63	Agency Agentic add-on rate for each additional client project (vs £500 on V1). An agency with 5 clients pays £9,500 + (4 × £750) = £12,500/yr (£2,500/client).
V1 → V2 upgrade	+£3,500/yr (In-house); +£4,000/yr (Agency)	—	Incremental upgrade price for existing V1 subscribers moving to the Agentic tier. Offered to beta and launch-cohort clients as a preferential rate.

Introductory offer for V1 existing customers: V1 subscribers upgrading to V2 within six months of V2 launch will receive 30% off the V2 price for the first six months of their V2 subscription. This reward for early adoption also incentivises V1 customers to remain on platform through the upgrade cycle rather than evaluating competitors at renewal.

Pricing trajectory note: AIO Fusion's intention is to increase pricing progressively as market penetration and business traction grow. This is a proven SaaS strategy: anchor new customers at a higher price point with each major product release or funding milestone, while protecting existing customers through time-limited grandfathering (typically 12–18 months). Value-based pricing — tying price increases to documented client outcomes such as AI citation rate improvements or media coverage growth — is particularly effective in emerging technology categories where ROI evidence compounds over time. Benchmarks from comparable early-stage B2B SaaS businesses indicate 10–20% price increases per major version are sustainable where customer outcomes are clearly demonstrable. Pricing will be reviewed formally at each major product release and at each funding milestone.

Competitive context: No direct comparator offers an equivalent autonomous PR programme management layer. Scrunch AI Enterprise and Profound Enterprise are custom-priced but estimated at \$1,000–2,000+/mo (£12,000–24,000+/yr) for monitoring only. AIO Fusion V2 at £8,500–9,500 is significantly below estimated enterprise GEO-monitoring pricing while delivering a categorically broader service.

5.1.3 US Market Pricing — V1 and V2 Agentic (from Q3 2027)

AIO Fusion's US pricing is denominated in USD and positioned at a 15% value premium to the equivalent UK rate. This premium is supported by market benchmarks: US PR platforms including Muck Rack (~\$15,000/yr), Cision (from ~\$10,000/yr), and Meltwater (\$15,000–\$20,000/yr) are priced materially above UK equivalents. AIO Fusion V1 at \$7,000/yr In-house and \$8,000/yr Agency base remains highly competitive against all US benchmarks while recovering the currency differential and reflecting the US market's higher willingness to pay for SaaS tools. The 15% premium is intentionally conservative — a 10–20% range is well-supported by cross-market SaaS data (SaaS Capital, OpenView Partners benchmarks) — to maximise initial US penetration and build the case study base required for the Q4 2027 structured launch.

Tier	UK Price (£)	US Price (\$)	Monthly equiv. (US)	Notes
V1 In-House	£5,000/yr	\$7,000/yr	\$583/month	Single brand. Full V1 platform. 15% value premium vs UK.
V1 Agency	£5,500/yr base	\$8,000/yr base	\$667/month base	+\$575/yr per additional client project.
+Per client project add-on	+£500/yr	+\$575/yr	+\$48/month	US agency add-on rate per client.
V2 In-House Agentic	£8,500/yr	\$12,000/yr	\$1,000/month	Full agentic layer. 15% premium. Available from Q2 2027 (UK) / Q3 2027 (US).
V2 Agency Agentic	£9,500/yr base	\$14,000/yr base	\$1,167/month base	+\$865/yr per additional client project.

Table 26a — AIO Fusion US Market Pricing. Note: USD/GBP rate applied at 1.27 for illustrative purposes only.

Beta Programme Pricing (June–November 2026)

Beta participants receive a 40% discount on V1 pricing in exchange for structured feedback and a commercial conversation at the end of the pilot period (see Section 4.2 and the Beta Pilot Proposal). Beta pricing is not publicly advertised.

Tier	Beta Annual Price	Notes
In-house (Beta)	£3,000/yr	40% discount on V1 In-house. Full platform access, one project.
Agency (Beta)	£3,300/yr base + £300/project	40% discount on V1 Agency. Multi-client access.

5.2 Indicative Revenue Growth Model

The following model reflects the aggressive but achievable scenario enabled by a three-person commercial sales team operational from November 2026 and a £111,600/year marketing programme. All figures are indicative and subject to market conditions, funding close, and hiring timelines. The model is cross-referenced with the companion financial model (AIO Fusion Financial Model v6).

Metric	Beta (Jul–Oct 26)	Year 1 (2027)	Year 2 (2028)	Year 3 (2029)	Year 4 (2030)
Total clients (end of period)	15	100–150	220–300	350–500	600–800
– PR Agencies	3–5	40–60	90–130	140–200	200–280
– In-House B2B	5–7	35–55	80–110	120–170	200–280
– In-House B2C	3–5	10–20	25–40	50–80	80–120
– SEO/Digital Agencies	0	10–20	25–40	40–60	60–80
– US (all segments)	—	5–15	30–60	80–130	150–200
ARR at period end	£0 (free beta)	£580k–£870k	£1.3M–£1.8M	£2.1M–£3.0M	£3.7M–£5.0M
Recognised revenue (period)	£0	£250k–£400k	£900k–£1.3M	£1.7M–£2.5M	£3.0M–£4.2M
Gross margin (est.)	—	~70–75%	~75–80%	~78–82%	~80–85%
Net burn / (surplus)	(£195k)	(£325k)	Breakeven–£(100k)	Surplus	Surplus
Seed round trigger	—	—	Q3 2027 at £200k+ ARR	Seed post-close	Series A window

Revenue model: Annual SaaS subscriptions paid upfront or monthly. Average revenue per client: PR Agencies ~£6,500/yr; In-House B2B ~£5,000/yr; In-House B2C ~£5,000/yr; SEO Agencies ~£5,000/yr; US clients USD-denominated at a ~15% value premium (see §5.1.3). Gross margin profile: COGS limited to LLM API costs, platform hosting, and per-client onboarding. Gross margin expands from ~70% in Year 1 to ~85% at scale as fixed infrastructure costs are absorbed.

Breakeven scenario: At ~220 clients averaging £5,750/yr ARR (Year 2), recognised revenue of ~£1.0–1.2M covers total operating costs including full team. The business reaches breakeven in Year 2 if the Phase 2 sales programme hits the lower end of the Year 1 client target.

6. Funding & Legal Structure

6.1 Pre-Seed Funding Requirement

AIO Fusion is targeting a pre-seed raise of £550,000–£600,000, structured as £250,000 of SEIS-eligible equity followed by a second tranche of £300,000–£350,000 under EIS. This capital funds the business through to Seed round trigger at £200,000+ ARR (target: Q3 2027), providing 18–20 months of runway post-close.

The raise is sized to build a three-person commercial sales team (Commercial Director + Agency SM + In-House SM) from V1 launch in November 2026, fund a professionally resourced marketing programme, and reach Seed trigger with meaningful runway headroom. The competitive window for category leadership in PR AI visibility is estimated at 6–18 months. The funding level is designed to capture that window.

Scenario	Raise Amount	Runway	Key Implication
Minimum (SEIS only)	£250,000	6–8 months	No commercial sales team; no marketing budget. Cannot reach ARR target within runway.
Conservative (SEIS + limited EIS)	£375,000	10–12 months	One sales hire (not three). Restricted marketing programme. High execution risk against well-funded competitors.
Target (SEIS + EIS) — recommended	£550,000–£600,000	18–20 months	Full 3-person commercial team from launch. Full marketing programme. Seed trigger achievable Q3 2027.
Upside	£700,000+	22–26 months	Over-capitalised at pre-seed stage. Increases dilution without proportionate acceleration benefit.

SEIS structure: SEIS provides investors with up to 50% income tax relief on investments up to £250,000 per company, plus Capital Gains Tax deferral and loss relief. The additional EIS tranche (£300,000–£350,000) provides 30% income tax relief. An Advance Assurance application to HMRC is in progress. Target Advance Assurance confirmation: August 2026. Target first close (SEIS tranche): September 2026. Target EIS close: December 2026.

Pre-money valuation: indicative at £1,500,000–£2,500,000, consistent with UK pre-revenue SaaS companies with a working product and experienced founding team. At £2,000,000 pre-money, a £575,000 raise gives investors approximately 22% equity (post-money £2,575,000), preserving meaningful equity for future rounds and a 5–7% EMI option pool.

6.2 Incorporation & SEIS Legal Costs

Accountants: Carpenter Box (carpenterbox.com) — appointed June 2026 as specialist advisors for SEIS/EIS compliance, incorporation, and ongoing accountancy.

Planned incorporation date: week commencing 15 June 2026. Registered in England & Wales (Companies House).

Stage	Fee
-------	-----

SEIS eligibility tax note	£1,250 + VAT
Incorporation of NewCo at Companies House	£300 + VAT
Advance Assurance application	£1,750 + VAT
Preparation of SEIS compliance statement to HMRC and share paperwork	£1,500 + VAT
Total (ex VAT)	£4,800 + VAT

SEIS and incorporation legal costs will be settled from the founders' investment (see Section 6.3) and are not drawn from pre-seed funding.

6.3 Founder Investment

Patrick Barrett and Natalie Linder are investing a combined £55,000 to finance platform development, tooling subscriptions, pre-incorporation operating costs, and the SEIS/EIS legal and incorporation fees (Section 6.2). This investment is structured as follows: Patrick Barrett £49,500 (£25,000 payable on incorporation, £24,500 payable August 2026); Natalie Linder £5,500 on incorporation.

Founder	Investment	Timing
Patrick Barrett (CEO / Co-Founder)	£49,500	£25,000 on incorporation (June 2026); £24,500 August 2026.
Natalie Linder (Co-Founder / Product Design)	£5,500	On incorporation (June 2026).
Total founder investment	£55,000	Covers: platform development to date, tool subscriptions, pre-incorporation costs, and incorporation/SEIS legal fees (Section 6.2). Not drawn from pre-seed raise.

On incorporation, ordinary shares will be issued as: Patrick Barrett (CEO / Co-Founder) — 90%; Natalie Linder (Co-Founder / Product Design) — 10%. An EMI option pool of 5–7% will be reserved at incorporation for senior developer and commercial hires.

[Registered address — to be confirmed at incorporation]

6.4 Use of Pre-Seed Funds

Pre-seed funding will be deployed across the following priority areas. Percentages are indicative and will be refined following final funding close and hire plan confirmation.

Category	Amount	% of £575k	Notes
Founders (18 months post-funding)	£111,000	19%	Patrick Barrett £37,000/yr + Natalie Linder £37,000/yr = £74,000/yr combined. Pro-rated over 18 months = £111,000.
Commercial Director (15 months from Sept 2026)	£112,500	20%	£75–90k base pro-rated 15 months; includes employer NI and pension contribution.
Agency SM + In-House SM (14 months from Nov 2026)	£112,000	19%	2 × £40–48k base × 14 months, including employer NI and pension.

Developer (15 months from Oct 2026)	£93,750	16%	£75k base pro-rated 15 months; employer NI and pension included.
Spencer / Bluhalo retainer (18 months)	£36,000	6%	£2,000/month × 18 months (from July 2026). Agentic layer development and technical advisory. Tapers after full-time developer onboarding.
Phase 2 marketing programme (Nov 2026–Apr 2027)	£28,000	5%	LinkedIn ads (£7k), events (£12k), PR/content research (£3k), SEO (£1.8k), PRCA/CIPR (£500). Full programme funded from revenue from Q2 2027.
Platform infrastructure + LLM APIs (18 months)	£25,000	4%	OpenAI, Anthropic, Google APIs; cloud hosting; dev tools. Scales with customer volume.
IT support (18 months)	£9,000	2%	£500/month × 18 months. Covers business IT support, hardware maintenance, and software troubleshooting.
Fractional CFO (Nov–Dec 2026; 2 months from V1 launch)	£6,000	1%	£3,000/month × 2 months (November–December 2026). Pre-seed capital covers the initial 2 months from V1 commercial launch. From January 2027, Fractional CFO is revenue-funded (~£3,000/month). Full-time CFO from US launch (Q3 2027), funded from Seed round proceeds. See §6.7 for full CFO section.
Operational assistant (Q1 2027 onward, 15 months)	£35,000	6%	£28,000–£32,000/yr pro-rated from Q1 2027 (est. £28k × 15/12 = ~£35k). Admin and research support across commercial and product teams.
Working capital and contingency	£7,750–£57,750	1–10%	Revenue ramp buffer; overrun protection; EIS close costs; unforeseen costs. Adjusted within the £575k envelope to reflect Spencer retainer increase (+£9k) and CFO 2-month pre-seed contribution (+£6k).
TOTAL	£575,000–£625,000	100%	Full pre-seed programme. Incorporation and SEIS legal costs are covered by founder investment (Section 6.3) and are not included here.

6.5 Operating Cost Structure

The table below sets out indicative operating costs post-funding. All figures are estimates and should be cross-referenced with the companion financial model. Items marked TBC will be confirmed on or shortly after incorporation.

Cost Category	Indicative Cost	Frequency	Notes
Bluhalo / Spencer Gallagher (development & advisory)	£2,000/mo	Monthly	£2,000/month from July 2026 (increased from £1,500/month). Covers platform build, agentic layer development, and strategic advisory. Tapers as full-time in-house developer (October 2026) and technical team mature. Reviewed at 12 months.

Platform hosting	TBC	Monthly	To be confirmed with dev team. Critical infrastructure COGS item.
LLM API subscriptions (OpenAI, Anthropic, Perplexity, Gemini)	TBC	Monthly	Maximum usage tiers set on incorporation. Scales with customer usage. Core COGS.
Replit platform build (outstanding)	£2,000 + VAT	One-off	Pre-incorporation development charges outstanding.
Bookkeeping	£500/mo	Monthly	Ongoing financial record management.
Accountancy — Carpenter Box	~£4,500/yr	Annual	Ongoing annual support beyond SEIS/incorporation engagement.
Legal (contracts, negotiations, employment)	TBC	Variable	To be scoped with appointed solicitor post-incorporation.
Further development agency support	TBC	TBC	Dependant on scope required alongside or beyond Bluhalo engagement.
Business communications & subscriptions	~£150/mo	Monthly	SaaS productivity tools, comms, and operational subscriptions.
Business insurance (PI, PL, Cyber, D&O)	~£400/mo (~£4,700/yr)	Annual (monthly quoted)	Professional Indemnity (~£1,500/yr), Public Liability (~£500/yr), Cyber insurance (~£1,500/yr), Director & Officer liability (~£1,200/yr). Indicative estimate; confirm with broker post-incorporation. Cyber coverage is critical for a data-handling SaaS business.
IT support	~£500/mo	Monthly	£500/month. Covers business IT support, device management, and software troubleshooting. £6,000/year.
Broadband	TBC	Monthly	Home / office broadband.
Hardware / Laptops	£1,200/unit (founders); £1,000/unit (per hire)	One-off per team member	MacBook Air or equivalent. Patrick + Natalie at incorporation: 2 × £1,200 = £2,400. Commercial Director (Sept 2026), Developer (Oct 2026), 2 × SM (Nov 2026): 4 × ~£1,000 = £4,000. Total Year 1 hardware: ~£6,400. US Sales Lead (Q2 2027): ~£1,000. Covered within working capital allocation.
CRM software — HubSpot Sales Hub Pro	~£375/mo (~£4,500/yr)	Monthly	Essential for 3-person sales team pipeline management. £125/user/month × 3 sales users. Activate from commercial launch (November 2026). Scales to 5-seat licence post-Seed at ~£625/month.
LinkedIn Sales Navigator (3 seats)	~£225/mo (~£2,700/yr)	Monthly	£75/user/month × 3 sales staff. Critical for agency targeting, outreach, and pipeline tracking. Activate from sales team launch (November 2026). Essential for reaching PR Agency and In-House buying teams.

Travel & entertainment (UK)	~£417/mo (~£5,000/yr Year 1)	Monthly	Client and prospect meetings, industry event attendance, team travel. Year 1 (2026–27): ~£5,000. Year 2: ~£8,000 (team growth, US travel). UK-focused in Year 1; US travel budgeted separately from Q3 2027 (Seed-funded).
UK office — Norwich (from Q2 2027)	~£900/mo	Monthly (from Q2 2027)	Flexible serviced office or co-working space, 4–5 desks, Norwich city centre. Indicative: £800–£1,000/month all-inclusive (desk hire, utilities, internet, meeting rooms). Not required in Year 1 (remote-first pre-Seed). Review post-Seed based on team size and in-person collaboration needs.
US office — flexible workspace (from Q2 2028)	~\$800/mo (~£630/mo)	Monthly (from Q2 2028)	WeWork / Regus hot-desk or team membership for US Sales Lead and US Sales Managers. Remote-first through 2027; small US physical presence from Q2 2028 post-Seed. Location TBC based on US Sales Lead hire city (target: NYC, Chicago, or Boston). Funded from Seed round proceeds.
Payroll processing software	~£120/mo	Monthly	BrightPay, Xero Payroll, or equivalent. Required from first employee hire (August–September 2026). Essential for PAYE, pension auto-enrolment (Nest), and payslip generation.

6.6 Founder Salaries (Post-Funding)

Founders will begin drawing salaries from the date of funding close at £37,000/year each. This reflects realistic UK pre-seed practice for a £575k raise — sufficient to operate full-time without constraining runway. Salary levels are staged against funding milestones: from Seed round close (target Q3 2027, when the business reaches £200k+ ARR), founders will increase to £70,000/year each — the mid-point of the £50,000–£90,000 Seed-stage founder benchmark range (SeedLegals 2025 data). From Series A (target 2029), salaries increase to £110,000/year each, representing the mid-point of the £90,000–£130,000 Series A range. This staged approach aligns founder compensation with the value created at each funding milestone and is consistent with UK SaaS founder benchmarks. See Table 34 for the full salary schedule.

Person / Role	Annual Salary	Monthly Cost to Business (est.)
Patrick Barrett — CEO / Co-Founder	£37,000 pa	~£3,560/mo (incl. employer NI and pension contribution)
Natalie Linder — Co-Founder / Product Design	£37,000 pa	~£3,364/mo (incl. employer NI and pension contribution)
Patrick Barrett — from Seed round (target Q3 2027)	£70,000 pa	~£6,740/mo (incl. employer NI and pension). Mid-point of £50,000–£90,000 Seed-stage benchmark (SeedLegals 2025).
Natalie Linder — from Seed round (target Q3 2027)	£70,000 pa	~£6,740/mo (incl. employer NI and pension). Mid-point of £50,000–£90,000 Seed-stage benchmark (SeedLegals 2025).
Patrick Barrett — from Series A (target 2029)	£110,000 pa	~£10,575/mo (incl. employer NI and pension). Mid-point of £90,000–£130,000 Series A benchmark.

Natalie Linder — from Series A (target 2029)	£110,000 pa	~£10,575/mo (incl. employer NI and pension). Mid-point of £90,000–£130,000 Series A benchmark.
--	-------------	--

6.7 Key Hire Salary Benchmarks

The following benchmarks reflect 2026 UK SaaS market rates for commercial and operational hires. Base salaries are calibrated to attract high-quality candidates while preserving runway; EMI option participation bridges the gap to full market rate. All hires are subject to funding close.

Role	Start Date	Base Range	OTE / Notes
Commercial Director / Head of Sales	September 2026	£75,000–£90,000	OTE £150,000–£180,000. Proven B2B SaaS sales leadership essential; MarTech or PR tech background preferred. Builds the commercial function, defines the sales playbook, and manages Agency SM and In-House SM. The single highest-impact hire — allow 3–4 months to recruit the right person. Begin process immediately upon funding close (target: August 2026 start). Use a specialist SaaS/MarTech recruiter.
Agency Sales Manager	November 2026	£40,000–£50,000	OTE £80,000–£90,000. Relationship-driven, ideally with prior agency-side experience (BD or account management at a PR or comms agency). Activates Agencynomics pipeline from day one. PRCA/CIPR network essential. 3-month recruitment lead time — commence process September 2026.
In-House Sales Manager	November 2026	£38,000–£48,000	OTE £75,000–£85,000. Consultative B2B seller, comfortable at marketing director-level conversations. In-house marketing or B2B SaaS background. Covers in-house B2B, B2C, and SEO agency segments. 3-month recruitment lead time — commence process September 2026.
Developer — Mid-Senior, AI/SaaS	October 2026	£65,000–£80,000	EMI 0.75–1.5%. Full-stack with demonstrable AI/agent experience (OpenAI/Anthropic SDK, multi-agent orchestration). Spencer/Bluhalo bridges but cannot own the long-term roadmap. Do not compromise on AI/agent experience for the V2 build.
Operational Assistant	Q1 2027	£28,000–£32,000	No OTE. Admin and research support across commercial and product teams. Manages scheduling, client onboarding logistics, data and CRM hygiene, and ad hoc research tasks. Enables the commercial team to focus on selling. 4–6 week recruitment lead time; begin process November 2026.
US Sales Lead	Q2 2027	£70,000–£85,000 (~\$85k–\$105k)	OTE £130,000–£160,000. Remote US-based. Leads US pipeline ahead of Q3 2027 soft launch. B2B SaaS sales experience in US market; PR tech or MarTech background preferred. Funded from Seed round. Subject

			to Seed round close and US pipeline readiness.
Fractional CFO (→ Full-Time CFO)	V1 Launch (Nov 2026) fractional → US Launch (Q3 2027) full-time	£3,000/month (fractional) → £85,000– £100,000/yr (FT)	Phase 1 — Fractional CFO (from November 2026, 2–3 days/week): £3,000/month. Pre-seed funded Nov–Dec 2026; revenue-funded from Jan 2027. Management accounts, investor reporting, SEIS/EIS compliance, Seed round financial preparation, R&D tax credit claims, cash flow management. Phase 2 — Full-Time CFO (from US launch Q3 2027, Seed-funded): £85,000–£100,000 base + EMI options (0.5–1%). Full financial strategy, Series A preparation, US corporate/tax structure, statutory accounts, board governance. Source via specialist SaaS CFO provider (FD Capital, Calunius, Scale with CFO).

EMI option pool: A pool of 5–7% is approved at incorporation, to be confirmed with Carpenter Box. Options are reserved for priority senior hires only — Commercial Director, Developer, and US Sales Lead. Options vest over 3–4 years with a minimum service period of 18 months to 2 years before any options can be exercised. This ensures alignment is earned over a meaningful tenure, not awarded immediately. Pool size and individual allocations confirmed with Carpenter Box at incorporation.

Recruitment timeline summary: Commercial Director — begin process immediately upon funding close (August 2026), targeting September 2026 start. Allow 3–4 months to recruit the right person; do not rush this hire. Agency SM and In-House SM — commence September 2026, targeting November 2026 start (3-month lead time). Operational Assistant — commence November 2026, start Q1 2027. US Sales Lead — commence Q1 2027, start Q2 2027 ahead of US soft launch.

Chief Financial Officer (CFO): Fractional from V1 Launch → Full-Time from US Launch

AIO Fusion will appoint a Fractional Chief Financial Officer (CFO) from V1 commercial launch (November 2026), funded from the pre-seed raise. A CFO — rather than a Financial Director — is the appropriate designation for a venture-backed SaaS business: the CFO role brings investor relations, fundraising financial strategy, and US corporate and tax structure capability alongside the operational finance brief. The fractional engagement (two to three days per week at £3,000/month) covers: management accounts, SEIS/EIS compliance reporting for pre-seed investors, cash flow management, investor KPI reporting, Seed round financial preparation, and R&D tax credit claims. Pre-seed capital covers November and December 2026 (2 months = £6,000). From January 2027, Fractional CFO costs are funded from operating revenue, removing them from the pre-seed capital envelope.

Fractional CFO cost: £3,000/month (2–3 days/week). On completion of the US market launch (Q3 2027), the business will transition to a full-time CFO appointment. This transition is funded from Seed round proceeds (target close Q3 2027 at £200k+ ARR). A full-time CFO at this stage would command £85,000–£100,000 base salary plus EMI option participation (est. 0.5–1%), and would lead: Series A financial preparation, US corporate and tax structure (Delaware C-Corp or equivalent), statutory reporting, and board-level financial governance. The fractional arrangement is recommended via a specialist SaaS/tech CFO provider (e.g. FD Capital, Calunius, Scale with CFO, or equivalent) to ensure domain experience without the risk of a premature full-time hire.

6.8 Grant Funding Strategy

AIO Fusion is pursuing non-dilutive grant funding via BidX (bidx.ai), a specialist UK grant application agency. Grant funding, where secured, reduces reliance on equity capital and extends

runway without diluting founders or investors. Applications are being prepared in June 2026 at a total BidX engagement cost of £12,500.

Grant Scheme	Funder	Indicative Award	Rationale / Fit
Innovate UK — SMART / Investor Partnerships	Innovate UK (UKRI)	£25,000–£500,000	Core Innovate UK grant programme for UK SMEs developing innovative products. AIO Fusion qualifies as an AI-enabled SaaS platform with demonstrable innovation over existing PR monitoring tools. SMART grant for early-stage R&D; Investor Partnership grant for post-investment growth. High priority application.
Horizon Europe — Innovation Actions	European Commission (UK associate member from 2024)	€500,000–€5,000,000	Horizon Europe opened to UK companies as of 2024 association. Innovation Actions fund market-ready technologies with strong commercial potential. AIO Fusion's GEO/AEO platform addresses an EU-relevant challenge (AI transparency and brand communications). Highly competitive; long application cycle. Contingency target.
DASA — Emerging Technologies	Defence and Security Accelerator (DASA / MOD)	£50,000–£1,000,000	DASA funds dual-use AI and communications technologies with defence and security applications. AIO Fusion's AI monitoring and disinformation-detection capabilities have potential application in government and public sector communications. Exploratory application.
NIHR i4i — Innovation for Implementation	National Institute for Health Research	£100,000–£2,000,000	NIHR i4i funds health and care innovations with clear implementation pathways. Relevant if AIO Fusion's platform is applied to NHS or healthcare communications effectiveness. Exploratory; requires a defined health communications use case and NHS partner. Contingency target.
BidX engagement cost	BidX (bidx.ai)	£12,500 fee	BidX provides end-to-end grant application management: eligibility assessment, application drafting, submission and post-submission support. Fee payable June 2026 from founder investment. No success fee model — fee is fixed regardless of outcome.

Grant income, where secured, will be disclosed to pre-seed investors and treated as non-dilutive income supplementing pre-seed equity. Priority is the Innovate UK SMART grant; Horizon Europe and DASA are secondary applications. NIHR i4i is contingent on identifying a suitable NHS communications partner.

7. Company Incorporation & Legal

7.1 Incorporation Overview

AIO Fusion will be incorporated as a private limited company in England & Wales (Companies House). The company will be structured from inception to support SEIS investment, IP ownership, and future funding rounds.

[Company name: AIO Fusion Ltd — confirm availability via Companies House]

[Registered address: []]

[Intended incorporation date: []]

7.2 Share Structure

Shareholder	Shares	% at Incorporation	Notes
Patrick Barrett (Founder)	[to be set at incorporation]	90%	Ordinary shares
Natalie Linder (Co-Founder)	[to be set at incorporation]	10%	Ordinary shares
Employee Option Pool (EMI)	[]	[]%	Reserve for developer / sales hire
Pre-seed investors (SEIS)	[]	[]%	Issued at funding close; new share class TBC
Total	[]	100%	

8. MVP Development & Testing

8.1 Status

Core Platform V1 MVP: development complete; entering testing phase June 2026. Platform has been incubated within Simpatico PR since January 2026. External developer is in place.

8.2 Testing Plan

- Primary test environment: Simpatico PR (internal use case)
- Additional pilot partners: [add names / organisations]
- Testing scope: all 10 core platform modules (see Section 3.1)
- Feedback mechanism: [structured survey / interview / Notion tracker]
- Test period: June – August 2026
- Success criteria: [define acceptance criteria per module]

[Define MVP test criteria and success metrics]

[Confirm pilot partner list and onboarding plan]

[Set up feedback collection process]

9. Team & Recruitment

9.1 Founding Team

Name	Role	Background / Credentials
Patrick Barrett	CEO / Co-Founder	More than 30 years' B2B PR agency management and journalism experience. Former Editor of Media Week during the first dotcom boom; journalist for The Guardian's Media Section, Marketing and SuperMarketing. Founded Simpatico PR Ltd in 2010 with a mission to elevate thought-leadership content and media relations; client list includes Accenture, Fjord, WPP companies (GroupM OOH, Mindshare, Landor, Fitch, Wavemaker) Dentsu (Merkle), GumGum, the7stars and OMD across martech, adtech, fintech, media and B2B SaaS sectors including fintech, greentech and edtech. Career spans digital media, social, programmatic, AI and Web 3.0 eras. Concept originator and product architect of AIO Fusion; leads product strategy, go-to-market and investor relations. linkedin.com/in/ukpatrickbarrett
Natalie Linder	Co-Founder / Product Design	Early career as researcher at Anglia Television and regional journalist. Founded and ran an award-winning hospitality business (2009-2016), overseeing a full renovation of a Grade II listed building; built a strong reputation for quality, events and operations. Returned to B2B PR specialising in start-up and scale-up technology businesses (fintech, professional services SaaS, service design) before joining Simpatico PR in 2022 as Senior Consultant. Leads product design, user experience and client workflow design for AIO Fusion; brings direct practitioner knowledge of how PR and marketing teams work day-to-day. linkedin.com/in/natalie-linder-0117ba9a
Spencer Gallagher	<i>Strategic Advisor and Technical Lead Consultant</i>	Digital entrepreneur, technology developer and agency growth authority. Founded Bluhalo in 1999 (built digital products for the Premier League, Tottenham, Liverpool, BlackBerry and Andy Murray), growing it to the 8th largest digital agency in the UK before a successful exit to Gyro (now part of Dentsu network) in 2008. Subsequently founded Cactus, the UK's leading agency growth consultancy, supporting 1,000+ agencies globally. Co-author of Agencynomics (Amazon 5-star bestseller on scaling digital agencies). Brings deep understanding of digital product businesses, go-to-market strategy, and scaling service businesses from startup to exit. linkedin.com/in/spencergallagher
